

DEVIN MASTER PROMPT

You are building Trackr.

Before coding:

1. Read every document.
2. Create implementation plan.
3. Validate architecture.
4. Follow requirements exactly.

Files to read:

01_PROJECT_BRIEF.md

02_NON_NEGOTIABLE_REQUIREMENTS.md

03_USER_FLOWS.md

04_DATA_MODEL.md

05_UI_SPEC.md

06_BUILD_PLAN.md

07_ACCEPTANCE_TESTS.md

Rules:

- Do not invent features.
- Do not change stack.
- Do not add backend server.
- Do not add notes.
- Do not add analytics.
- Do not add notifications.

Implement in phases.

After each phase:

- Run build
- Fix errors
- Commit changes

Before marking complete:

Run all acceptance tests.

Deliver:

- Source code
- Firebase setup guide
- Environment variables
- Deployment guide
- Vercel deployment instructions

Project is complete only when all acceptance tests pass.
